

# Stocknet

Making farming easy and accessible to everyone through collective efforts and commitment. Ensuring collaboration, sustainability and coherence amongst all our partners and stakeholders through the use of technology and system based solutions

# Welcome To Stocknet

Emb Meat Supplies Trading (Pty) Ltd (Stocknet) was founded in 2013 as a meat supplier selling processed beef, and poultry products. Our company has grown over the years to serve a variety of markets in South Africa. In 2022, we formally created a fantastic livestock trading platform that allows anyone to acquire and sell livestock assets while leveraging the profitability of livestock farming. Our platform connects investors with professional farmers that specialize in livestock farming with suitable infrastructure and human resource.

To ensure Stocknet's success and profitability, we established an ecosystem with three key players working together to build a business capable of generating long-term recurring revenue while also providing opportunities to ordinary people who lack farming experience, skills, and resources.

- Investors: These individuals provide cattle (capital) to Stocknet, which fuels its growth and operations.
- Farmers: The backbone of Stocknet, farmers actively engaged in agricultural activities is tasked to take care of the livestock asset for the duration of the contract.
- Platform (Stocknet): Stocknet acts as the intermediary, connecting investors and farmers.

# Stocknets Back-Bone

By fostering collaboration among Investors, Farmers, and the Platform, Stocknet aims to create a win-win situation: investors receive consistent income, farmers gain access to resources, and the broader community benefits from sustainable agricultural practices.

**Partnering with Stocknet as a farmer offers several advantages. Let's delve into the key benefits:**

Access to Financing Options | Contract Grower Opportunity | Market Exposure | Access to Latest Technology | Crucial Data Insights

# Livestock

## Broiler Chickens

Broiler chickens are raised specifically for meat production. Commercial broilers reach slaughter weight between 6 and 14 weeks of age making them an ideal option for cashflow generation. This livestock asset is most ideal and common due to high demands of poultry products and the profitability of the products

## Angus Cows

Cattle is the most common form of livestock. The advantages of cattle farming is that beef meat is widely consumed daily creating a very high demand for cattle farmers. The market for cattle is very broad and very profitable.

## Piggery Farming

Piggery or pig farming can be profitable if it is managed properly and efficiently. Pig farming is a lucrative business that can provide a significant source of income. The key advantage of piggery farming from an investment point is pigs grow fast and are prolific breeders, farrowing 10 to 12 piglets at a time.

# How it works

01

## Investor

The investor identifies and buys a livestock asset from the options available on the platform.

02

## Farmers

Farmers take care of the livestock asset for the duration of the agreement, doing everything

03

## Get Profitshare

The livestock asset is sold at a profit at the end of term. You receive profits plus the initial value of the livestock.

# Livestock Options
